- Keep the Policy Group and senior leadership adequately informed

- Acknowledge that in addition to the COVID-19 pandemic public safety will still need to coordinate response to day-to-day (LE, Fire, EMS)
- Develop COVID-19 situational awareness of impacts, response actions, and gap analysis for effective support
- Build response organization common operating picture for support and coordination being provided throughout the EOC

## COVID-19 Response Summary

### Wildfires:

**Bighorn**, Pima County – Size: 118,804 acres / Containment: 58%

- Minimal backing, creeping, smoldering, and burning conditions have been moderated due to favorable weather conditions. While upslope runs are still possible, shorter burn windows exist. In areas where fire is still established, they are filling in instead of actively advancing.
- Forward spread has been dramatically slowed and activity is confined to unburned islands. Fire in the heavier fuels south of Summerhaven continue to back down the mountain but are not moving very quickly. Acreage gained is estimated at between 300-500 acres.
- Percent of containment is lower due to multiple firing operations to secure values at risk in the Mt. Lemmon area and to the north near Oracle.
- Closures: View the closure orders and maps at [inciweb.nwcg.gov/incident/closures/6741/](https://inciweb.nwcg.gov/incident/closures/6741/). Catalina Highway is closed to the public at milepost zero. Only residents and business owners may pass. Oracle Control Road is closed.

<https://inciweb.nwcg.gov/incident/6741/>

**Wood Springs 2**, Navajo Nation – Size: 11,857 acres / Containment: 17%

- Additional resources are being ordered to assist with firefighting operations.
- Road Closures remain in place around the fire area. All of Navajo Route 26 is closed. Navajo Route 7 is closed from Fluted Rock north to BIA Route 8015.
- Temporary flight restrictions are in place over the fire area. An area closure is being planned for implementation on 7/3/2020.
- Fire behavior remained active today, but the majority of activity was isolated to the northwest portion of the fire. The fire is burning in steep inaccessible terrain where fuels and topography are driving the majority of the fire behavior.
- Active surface fire is going to continue moving through the drainages on the northwest side of the fire. Torching and spotting from thicker pockets of pine regeneration, along with drainage runs are expected as fire gets aligned with slopes. The potential for strong and erratic outflow winds from nearby thunderstorms pose risks to all holding lines.
- Continued active fire is expected along the northwest side of the fire along the drainages. Overall fire behavior is expected to be moderated some due to the increased relative humidity values. The 20% chance of thunderstorms could generate strong, gusty, and erratic outflow winds that could increase fire behavior and pose risks to all holding lines.

<https://inciweb.nwcg.gov/incident/6813/>

**Mangum**, Coconino County – Size: 71,450 acres / Containment: 67%

- NICC has placed a 48 hour hold on SEC 1s and 2s due to 4th of July, Rainbow Gathering, and other functions/events; unlikely that the incident will have adequate night security for fire area. Unlikely this order will be filled prior to 07/04/20.
- Fire behavior was primarily limited to creeping and smoldering, with isolated torching in unburned interior islands.
- Anticipate evening fire activity to be primarily limited to smoldering. Minimal smoke production expected.

<https://inciweb.nwcg.gov/incident/6748/>

**Bringham**, Greenlee County – Size: 23,142 acres / Containment: 40%

- The Bringham fire has decreased in complexity and has moderated to the point that command of the fire will transition from the White Mountain Zone Type 3 IMT, led by IC Matt Bullmore, to a Type 4 Organization, led by IC Joe Names, on July 2, 2020.
- A Forest Service BAER team is currently evaluating the potential for post-fire effects.

## COVID-19 Response Summary

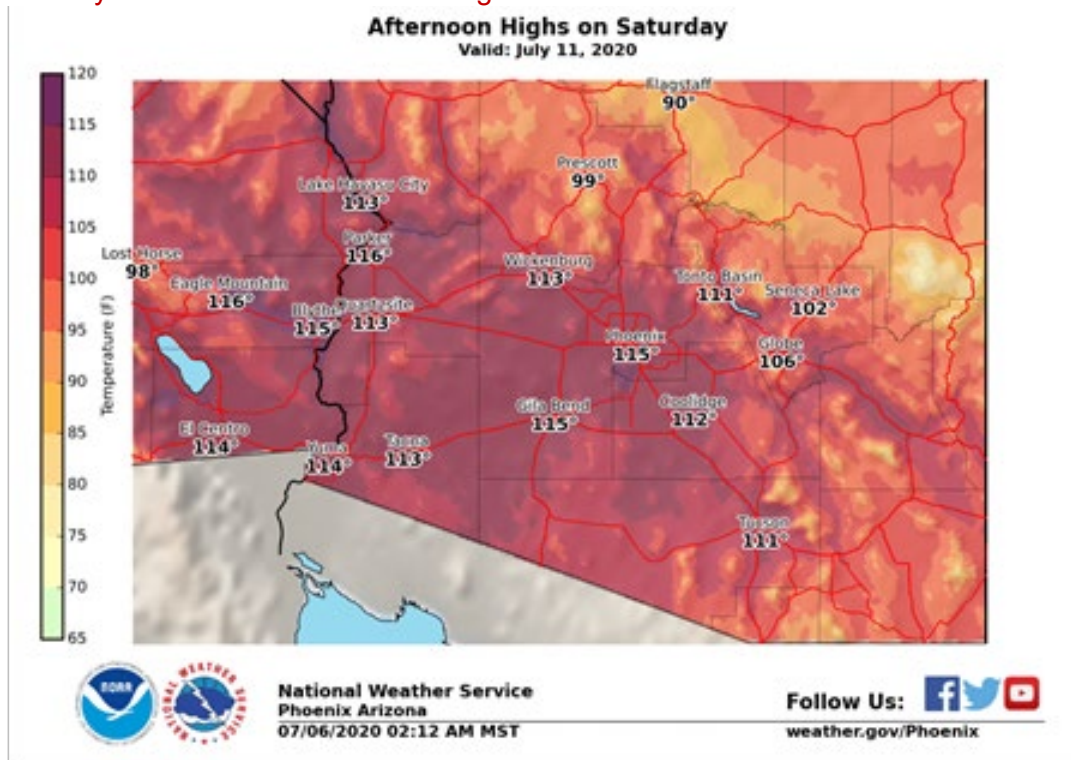

### Weather:

The big story this week will be the continued hot temperatures with even hotter temperatures by the weekend with near record to record heat expected.

Monsoonal moisture is rather meager with only slight chances for thunderstorms near the International border with dry conditions elsewhere.

A hot week in Phoenix with high temperatures at least 110 degrees each day, it's going to get even hotter over the weekend. Unseasonably strong high pressure aloft will cause highs in Phoenix to reach or exceed 115 Saturday and Sunday and heat risk will become high over the central deserts.
